Measured Performance of the Network Time Protocol in the DARPA/NSF Internet System

David L. MIlls

Abstract

This paper describes a series of experiments involving over 100,000 hosts of the DARPA/NSF Internet system and located in the U.S., Europe and the Pacific. The experiments are designed to evaluate the availability, accuracy and reliability of international standard time distribution using the DARPA/NSF Internet and the Network Time Protocol (NTP), which is designed specifically for use in a large, diverse internet system operating at speeds from mundane to lightwave. In NTP a distributed subnet of time servers operating in a self-organizing, hierarchical, master-slave configuration exchange precision timestamps in order to synchronize subnet clocks to each other and national time standards via wire or radio.

The experiments are designed to locate Internet hosts and gateways that provide time by one of three time distribution protocols and evaluate the accuracy of their indications. For those hosts that support NTP, the experiments determine the distribution of errors and other statistics over paths spanning major portions of the globe. Finally, the experiments evaluate the accuracy and reliability of precision timekeeping using NTP and typical Internet paths involving DARPA, NSFNET and other agency networks. The experiments demonstrate that timekeeping accuracy throughout most portions of the Internet can be ordinarily maintained to within a few tens of milliseconds, even in cases of failure or disruption of clocks, time servers or networks.

Keywords: internet clock synchronization, standard time distribution, Internet protocol, timekeeping experiments.

Table of Contents

1.	Introduction										1
1.1.	Standard Time and Frequency Dissemination										2
1.2.	The Network Time Protocol										2
1.3.	Determining Time and Frequency										3
2.	Discovering Internet Timetellers										4
2.1.	Evaluation of Timekeeping Quality										6
2.2.	Discussion										
3.	Survey of NTP Hosts										8
3.1.	Errors Due to Statistical Delays										9
3.2.	Errors due to Radio Propagation Effects									1	11
3.3.	Errors due to Radio Clock Phase Noise										13
4.	Conclusions										15
5.	References										15
List of	Figures										
Figure	1. Calculating Delay and Offset										4
	2. Error Distribution by Protocol										
	3. Offset vs Delay										
Figure -	4. Raw Offsets										10
_	5. Filtered Offsets										
_	6. Error Distribution for NTP hosts										
	7. Radio Clock Frequency Error										
	8. Radio Clock Offset Error										
List of	Tables										
Table 1	. Time Responses by Protocol										5
	2. Time Responses by Category										
	Radio Propagation Delay
